

Friday — September 25, 2026

Time	Session
8:30 AM	Digital Tools, Automation & Digital Twins Development and Implementation of a Digital Operations Logbook for the NETL TRIGA Mark II Reactor Sam Queralt
8:50 AM	Recent Experience with Lightweight Digital Tools for Scheduling and Documentation at the NC State PULSTAR Research Reactor Austin Wells
9:10 AM	Natura Resources MSR-1 Goals and Objectives Jonathan Scherr
9:30 AM	Keeper: A Framework for Demonstration Autonomous Operations Ryan Stewart, Casey Kovesdi, Emerald Ryan, Sonali Roy, Manaswin Oddiraju, Anand Kirshnan, Greg Shannon, William Dawn, Kolton Heaps, Amanda Foley, Linyu Lin, Joseph Oncken, William Wakeman
9:50 AM	Advancing Digital Twin Development of Research Reactors Through a Shared Platform Ryan Stewart, Emerald Ryan, Jieun Lee, Logan Browning, Nicholas P. Luciano, Cole Gentry, Kevin Clarno
10:10 AM	Live 3D Radiation Mapping Saarthak Midha (sar-tha-k)
10:30 AM	Break
10:50 AM	Nuclear Data & Xenon Spectroscopy Analysis of Xenon Prompt Gammas from Thermal Neutron Capture Andrew David Rosen
11:10 AM	Design and Fabrication of a System for High-Pressure Xenon Irradiation Robert Cerna Morales
11:30 AM	Xenon-135 Production and Prompt Gamma Activation Analysis Ivy Seidel, Will Flanagan, William Charlton, Derek Haas
11:50 AM	Measurement of the Isomeric Yield Ratio of Xenon-135m from Thermal Neutron Capture on Xenon-134 Grace Martin
12:10 PM	Aging Infrastructure, Failure Investigation & Redesign Update on the Operability of the Reed Research Reactor Jerry Newhouse
12:30 PM	Lunch & Exhibits
1:10 PM	Free Time & Departures Conference concludes

University of Missouri

MURR — University of Missouri Research Reactor

Russel Gibson · gibsonrw@missouri.edu

For 60 years, the University of Missouri Research Reactor (MURR®) has safely delivered reliable neutron science and lifesaving medical isotopes to the United States and the world. As the highest-power university research reactor in the U.S., MURR operates at 10 megawatts and serves as a critical national resource for researchers, scientists, engineers, students and industry partners.

As demand for nuclear research, products, and partnerships increases, MURR is expanding its current facility with multiple building additions while looking to the future with NextGen MURR, a new reactor envisioned to be the hub of an integrated nuclear ecosystem in Columbia, Missouri. Building on six decades of safe operational excellence and innovation, the new reactor is being designed to advance neutron beam science; multiply training, research and educational opportunities; and ensure stable supplies of medical isotopes saving and improving lives for generations to come.

With MURR and NextGen MURR, the University of Missouri is committed to raising expectations for research reactor performance, achieving excellence, and serving as the benchmark for research reactors at a global level.
